

Convert Fuel Buddy Export from Old Format to New Format

We have altered the structure of the export file to make it more user friendly since we found a lot of our users not just using the files for back up but also for analyzing data.

The easiest way to get the file in the new format is to export your data out of the latest Fuel Buddy version. But if for some reason you need to alter the old file manually, it's a simple three-step process as shown below.

You will only need to worry about Fuel_Log.csv, since this is the only file that has changed. This is what the old Fuel_Log.csv looked like.

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S
ID	Vehicle ID	Date	Odometer	Qty	Partial Fill	Total Cost	Distance Travelled	Eff	Octane	Fuel Brand	Filling Station	Notes	date	day	month	year	Receipt Path	Service Type
22	Default Car	Fri Feb 21 02:55:25 IST 2014	1932	128.86	0	0	1033	18.856882	90	SHELL	ABC		139293152	21	1	2014		Fuel Record

To get this in the new format, here is what you need to do:

1. Delete column C (Date)
2. Delete column N (date)
3. Increment all the values in column P (month) by one. So in the example shown above month should contain the value 2

That's it. You are done! The new file should now look something like this.

ID	Vehicle ID	Odometer	Qty	Partial Fill	Total Cost	Distance Travelled	Eff	Octane	Fuel Brand	Filling Station	Notes	day	month	year	Receipt Path	Service Type
1	Default Car	1932	128.66	0	0	1033	18.856882	90	SHELL	ABC		21	2	2014		Fuel Record

Place the file in the main directory of your Google Drive account and export away!

If you face any issues please feel free to write to us at support@mobifolio.net
